

Gentlemen/Gentlewomen:

I firmly believe we as consumers have enough internet access opportunities in broadband from the various telephone companies, cable companies, and satellite vendors.

I am strongly against BPL due to (1) the interference in the 2MHz - 80MHz band (as demonstrated in testing by the Japanese and the British) and (2) the recently demonstrated under-engineering of our nation's power-grid. Let's improve what we have for power, a vital utility for our nation, and for us as consumers. Thank you
